

Karaoke-version.com Launches Custom Backing Track Online.

A "backing track" is the instrumental version of a song that accompanies the singer. Thanks to the success of having 20,000 available songs, the karaoke version website (<http://www.karaoke-version.com/>) now offers the "Custom Backing Track", a state of the art service for the creation of downloadable mp3 accompaniments.

The Custom Backing Track (<http://www.karaoke-version.com/custombackingtrack>) meets a variety of musical needs. It is useful for musicians who long to play the solo of a classic rock tune on an instrumental version without guitars, drums or bass. It can be used by singers who wish to perform on an acoustic version while suppressing electric instruments, or employed by singing masters who want to isolate vocals on a song in order to train pupils' voices. Even musical creators, who wish to collect sound samples to create bootlegs or mash-ups, will find the Custom Backing Track invaluable.

The Custom Backing Track is an innovative, exclusive feature that offers new possibilities to musicians. The principle behind it is quite simple: by selecting a song and removing or adding tracks, the musician can create backing tracks for guitars, for drums, or for singers. Previously, no such tool was available for practice. It allows musicians to rehearse and record favourite bands and legendary tunes while a track involving specific instruments has been removed.

The assets of Custom Backing Track are its universal MP3 format, professional quality, the ability to test the program through free songs ready to be mixed, unlimited mixing and a library of over 2000 available songs.

To access a trial account, please use the following details: login: 'demopr', password: 'recisio'. Simply connect (<http://www.karaoke-version.com>), and then check your account (http://www.karaoke-version.com/my/login_req.html).
